

## How system the system works

- 1 Presenter uses a wireless microphone which provides a feed to the interpreter's monitoring receiver. 2

Interpreter wears headset-microphone that connects to:

- 2 (A) The interpreter's headset microphone is connected to Monitoring Transceiver so she may best monitor Presenter, which increases concentration and provides best quality and accuracy of translation.  
(B) The interpreter's headset microphone is connected also to the Transceiver so interpreter's voice may be broadcasted wirelessly to the user's.

- 3 Receivers & Headsets for use by participants with independent volume controls

### The system is designed to work as follows:

- Presenter will use wireless microphone 1 to transmit their voice to Monitoring Transceiver. 2
- Interpreter will connect their headsets to Monitoring Transceiver to listen directly to Presenter and connect their microphone plug to transceiver. 2
- Interpreters will transmit to target language to the receivers and headsets that the audience will wear 4 .
